⚠ **DATASET AUTHENTICITY DISCLOSURE: SIMULATED / DEMONSTRATION DATA**

This report was generated using a simulated demonstration dataset (**trace_ai_synthetic_road_accident_telemetry.csv**, SHA-256: **bfccd5d400a7f1fcecddd93891a0b6729892caab497018a023bb046900e68bc0**). The SHA-256 cryptographic digest verifies file integrity against the hashed version, not real-world evidence authenticity. Direct observations from this file represent numerical inputs within an illustrative scenario and are **not authenticated real-world crash data retrieval (CDR) hardware pulls** from physical vehicles. TRACE AI is an automated software analysis tool and does not claim accredited forensic laboratory status. Unverified video containers and steering sensor streams are explicitly declared as unavailable.
